A Smart Accounting and Tax Professional Committed to Continuous Improvement

[An Accountant Grounded in Fundamentals and Aspiring to Grow]

Hello. I am an accounting professional who is strengthening a solid foundation in accounting and tax with new tools from IT. While preparing for the first stage of the Korean CPA examination and earning the Financial Manager certification, I developed a deep respect for accounting standards and principles. More recently, I have been exploring how to apply this knowledge to practice more efficiently through data. I value the essence of the work over flashy technology and strive to be a dependable teammate throughout the process.

[Learning That Began with Inefficiency]

Through practical work, I experienced how much precision is required to handle numerous vouchers and datasets, and how much time and effort the process consumes. Searching large ledgers for specific data and repeatedly processing information in Excel left me wondering whether that time could instead be spent on analysis and review. This naturally led me to coding and data studies, with the goal of building tools that reduce repetitive work for colleagues.

[Technology as a Tool That Helps People]

A personal app-development project showed me the possibilities of technology as a support tool for business. I am now building on that experience by researching and developing a natural-language financial data analysis AI tool.

Even without writing complex SQL, users can ask questions such as, 'Analyze the relationship between a specific expense and sales for Client A in Q2 versus Q1.' The system interprets the question, retrieves values from the database, and immediately presents them as a table, summary report, and visualization chart to support decision-making.

The current version focuses on accurate answers. Future development will use Python data-analysis libraries to expand its scope and suggest statistically meaningful relationships with other accounts or potential anomalies, helping practitioners uncover insights they may otherwise miss.

When I think of an improvement during work, I make a note and later implement it in code. I believe that consistently learning and applying new technologies can make an organization's systems simpler and more efficient.

[Tax Risk Identification through Multi-Year Return Comparison]

My analytical approach has consistently appeared throughout the tax work I have handled. When reviewing my subsidiary's tax credit for capital contributions covering deficits, I reorganized the eligibility requirements and calculation structure and submitted an accurate claim.

While reviewing accounting-firm adjustments for a company's local corporate income tax return, I noticed that the reported amount was unusually large. I traced the local income tax calculation step by step, found that foreign tax credits had been deducted incorrectly under the tax base rules, and corrected the issue just before the filing deadline.

For a parent company, I compared three years of local corporate income tax returns, identified omitted deductions, organized the findings into an amended claim, and secured a refund of KRW 200 million.

I also reviewed an overstatement of the Special Tax for Rural Areas. By reordering tax-credit application priorities, I confirmed that replacing the employment-increase credit with the R&D and human-resources development credit would reduce the additional rural tax. Based on this structure, I filed an amended claim and reduced the related tax burden to KRW 0.

[Accounting Capability Covering Consolidation, Costing, and Disclosure]

While preparing for the Korean CPA examination, I studied advanced accounting topics such as consolidation, business combinations, equity method accounting, and derivatives at a professional level. This gave me a strong foundation for sound accounting judgments in practice. Although I have not directly led consolidation work, I analyzed consolidation adjustment schedules while reviewing the company's consolidated financial statements, identifying why each item was adjusted and how separate financial statements were reconstructed at the consolidated level.

By tracing actual figures, I learned how an investee's financial statements are reflected in consolidation, why adjustments not visible in separate statements are required, and how ownership changes or valuation differences affect consolidated profit. This gave me a practical understanding of the overall consolidation process and confidence that I can follow its workflow in practice.

To broaden my accounting judgment, I earned a Cost Analyst certification, strengthening my understanding of cost structures and cost flows and improving my interpretation of financial statements.

I also automate repetitive, error-prone tasks using VBA or simple tools. In disclosure work, I currently prepare XBRL financial statements and independently study XBRL notes using professional guidance. Learning new standards and technologies has naturally expanded my overall accounting and tax capabilities.

[Commitment to Continuous Learning and Growth]

I view accounting and tax not as routine processing but as fields in which I can continue learning and growing. New standards and complex structures interest me more than they burden me, and I naturally enjoy finding ways to make existing methods more accurate and efficient. My continued study, certifications, and automation efforts all stem from genuine interest in the work itself.

I have considered whether my analytical and automation-focused approach would transfer to other environments. I concluded that it would, because the essence of the work is to structure information and make judgments according to standards. In a new environment, I first understand the structure, then look for improvements. This has repeatedly improved efficiency and accuracy. I will continue expanding my capabilities as standards and technologies evolve, contributing to greater stability and efficiency across an organization's accounting and tax functions.

EXPERIENCEJOYCITY Corporation

Nov 2023 - Present

Total: 3 years

Manager / Financial Strategy Division, Financial Accounting Team

2 years 9 months

[Financial Accounting]

- Monthly, quarterly, and annual closing and review of financial statements
- Tangible assets: depreciation review; acquisition, disposal, and replacement review; impairment testing and related accounting
- Investment property: impairment testing; review and accounting for reclassification between owner-occupied and investment property
- Intangible and virtual assets: accounting for virtual-asset staking rewards; transfer and administration; impairment testing and related accounting
- Lease accounting: lessor and lessee accounting review; review and accounting for extensions, modifications, terminations, and subleases

- Payroll allocation by department
- Recognition and reversal of provisions, including annual leave and bonuses
- Settlement of royalties and vendor expenses
- Sole responsibility for the end-to-end purchasing process: review of payment approvals and corporate cards; voucher review and validation of expense attribution
- Internal accounting control system support for purchasing, assets, and ITGC
- Independent bookkeeping for a subsidiary: journal entries, closing, VAT, and cash planning
- Analysis of consolidation adjustments, including elimination of intercompany transactions, investment-equity relationships, and unrealized gains and losses, supported by advanced accounting knowledge from passing the first stage of the Korean CPA examination
- Preparation of XBRL financial statement body and review of disclosure materials
- Research and review for preparation of XBRL notes

[Tax Accounting and Filing]

- VAT filings for the subsidiary and purchases for the parent company
- Withholding tax filings and submission of payment statements

Employment income

Business income

Other income

Corporate withholding tax

Applied reduced treaty rates after reviewing tax treaties by country and income type; requested, reviewed, and maintained residence certificates.

- Review of corporate income tax and local corporate income tax filings
- Identification and correction of filing errors and execution of amended claims
- Foreign financial account reporting
- Resident tax reporting for business locations
- Securities transaction tax reporting
- Comparison of three years of local corporate income tax returns and an amended claim resulting in a KRW 180 million refund
- Analysis of the Special Tax for Rural Areas calculation and adjustment of deduction priority, reducing KRW 40 million to KRW 0 through an amended claim
- Identification of an accounting firm's filing error, saving approximately KRW 30 million in tax

[ERP Migration and System Transition]

- Participated in migration from SAP to Douzone ERP
- Migrated key master data, including fixed assets and vendors
- Validated and tested the integrity of migrated data
- Tested and analyzed bugs and errors during system transition
- Coordinated directly with Douzone representatives to resolve errors and improvements

[Purchasing and Settlement]

- Sole responsibility for the end-to-end purchasing function
- Vendor expense settlement and payment review
- Royalty settlement
- Review of expense attribution, department, account, and supporting evidence
- Review of input VAT deductibility for purchases

[Business Automation and AI]

- Planned and built multiple AI-based business automation programs
- Automated repetitive accounting and tax tasks
- Improved work efficiency and review accuracy
- Built multiple automation tools ready for direct practical use

EDUCATION **Dong-eui University** 2012 - 2019 B.B.A. / Business Administration

AREAS OF EXPERTISE

LANGUAGE English - Conversational

AWARDS & OTHER 1st Place, Kiwoom Securities University Mock Investment Competition

CERTIFICATIONS

- Tax Accounting Level 1	- ADsP (Advanced Data Analytics Semi-Professional)
- Passed Stage 1 of the Korean CPA Examination	- AFPK (Associate Financial Planner Korea)
- Financial Manager	- Engineer Information Processing
- Cost Analyst	- SQLD (SQL Developer)
